

Descriptions for Diagnostic Radiographer Restricted Scope of Practice

General Radiography	General Radiography refers to the controlled use of x-rays and dedicated x-ray irradiating apparatus for imaging of the human body to facilitate the diagnosis and treatment of disease or injury in a licensed healthcare facility.
Dental Radiography	Dental Radiography refers to the controlled use of x-rays and dedicated x-ray irradiating apparatus for imaging of the oral cavity and maxillofacial anatomy, to facilitate the diagnosis and treatment of disease or injury in a licensed healthcare facility.
Magnetic Resonance Imaging (MRI)	Magnetic Resonance Imaging (MRI) refers to the use of magnetic field and radio waves for multi-planar imaging of the human body to facilitate the diagnosis and treatment of disease or injury in a licensed healthcare facility. MR imaging may involve the use of contrast media for diagnostic and therapeutic purposes.
Radionuclide Imaging	Radionuclide Imaging refers to the controlled use of radiopharmaceuticals for imaging of the human body to facilitate the diagnosis and treatment of disease or injury in a licensed healthcare facility. Radionuclide Imaging also involves in the use of radiopharmaceuticals for therapeutic purposes.
Mammography	Mammography refers to the controlled use of x-rays for imaging of the breast and image-guidance (localisation) for interventional procedures, to facilitate the diagnosis and treatment of breast conditions and disease in a licensed healthcare facility.
Computed Tomography (CT)	Computed Tomography (CT) refers to the controlled use of x-rays for multi-planar imaging of the human body to facilitate the diagnosis and treatment of breast conditions and disease in a licensed healthcare facility. CT imaging may involve the use of contrast media for diagnostic and therapeutic purposes.
Vascular-Interventional Radiography (VIR)	Vascular and Interventional Radiology (VIR) refers to the controlled use of x-rays together with intravenous contrast media to produce real-time images for diagnostic and therapeutic purpose in an aseptic environment.
